ABOUT THE COVER
CEA TCB (magenta), a novel T-cell bispecific antibody, specifically binds LS174T tumor cells (red) subcutaneously cografted with huPMBCs (green T cells) into the skin of mice. Tumor-cell targeting by CEA TCB is demonstrated by intravital, 2-photon microscopic imaging, 24 hours after intravenous injection of fluorescently (A647) labeled CEA TCB. For details, see the article by Lehmann and colleagues on page 4417 of this issue.
